

Architectural Services

Put agile integration at the center of IT architectural transformation

Harness the full power of your evolving IT architecture by partnering with Dell Boomi's top architectural experts. Architectural Services help you align and connect applications, data, people and processes — and ultimately your business.

Collaborate with Boomi technical, solutions, business and enterprise architects who offer extensive industry experience. They will help you address immediate tactical challenges and create a strategic road map for long-term success. Seven discrete service offerings help you refine your overall architecture, then zero in on areas such as performance, governance, security and capacity.

Key Benefits

Accelerate IT innovation

Embracing cloud, mobile, IoT and other modern technologies — while maintaining core legacy systems — requires agile integration and data management. Ensure alignment and automation across hybrid IT environments to drive the innovation and ROI that business leaders demand.

Increase performance and capacity

The rapid growth of applications and data requires increasingly flexible IT systems. Architectural Services help you engineer scalability to support even the most demanding and dynamic enterprise workloads, both batch and real-time.

Align IT with business goals

Whether the goal is operational efficiency, omnichannel engagement or data-driven analytics, automated data exchange and workflows across diverse applications and stakeholders is a must. Boomi experts blend IT, business and domain expertise to ensure your architecture is designed to fulfill business goals.

Leverage the full Boomi platform

Go beyond integration with Boomi capabilities for governing master data, creating APIs, building workflow automation, and connecting to partner B2B/EDI networks. Boomi provides expert architectural insights and practical guidance for multiplying your ROI. Make best use of Boomi's breadth of functionality to drive digital transformation.

Technical Architect

- Technical assistance (installation, testing, etc.)
- Performance and capacity reviews
- Technical road map recommendations

Solutions Architect

- Focus on specific use cases
- Solutions to business challenges
- Blends business and IT skills

Business Architect

- Early project engagement
- Aligns technology with business need
- Focus on business goals and value

Enterprise Architect

- Top-level view of application architecture
- Focus on IT strategy and integration planning
- Maps adoption of Boomi unified capabilities

Our Architectural Services teams include technical, solutions, business and enterprise experts.

A Foundation for IT Transformation

Architectural Services offers seven discrete packages from our professional services team and tailors them to your specific requirements, starting with a base-level technical assessment.

Boomi architects collaborate with you on-site and online for analysis, feedback and recommendations to build an agile integration architecture that is strategically aligned with your business needs.

Key Services

Technical Evaluation

As a starting point, the technical evaluation reviews your existing environment and touches on infrastructure, performance, security, operations/governance and road map development.

Infrastructure & Architecture Review

An overall technical architecture review provides feedback and recommendations of current and future application, infrastructure and integration environments.

Performance Analysis

A Boomi team provides analysis and recommendations on optimizing your integration performance, including CPU, disk, memory and transaction processing.

Capacity Planning & Assessment

Evaluates existing capacity, with recommendations to accommodate growth and future projects.

Operations & Governance Evaluation

Get expert recommendations on guiding software development lifecycle (SDLC), roles and responsibilities, monitoring and alerting, folder structures and other aspects of operations and governance.

Security Assessment

Provides a security-centric review of your application and network environments for access authorization, and protection for file systems and APIs.

Customer Road Map

Provides a workshop session to focus on your current and future road map and business capabilities goals, with the aim of lowering integration costs and taking advantage of the full suite of Boomi platform capabilities.
