

Exchange: B2B/EDI Management

Simplify how you manage your B2B trading partner network

Dell Boomi provides a complete native-cloud platform for managing your partner network interactions. You can easily build, deploy and manage both traditional EDI and newer Web services to streamline and accelerate your business.

Regardless of where your organization sits in the supply chain — from manufacturing and distribution to warehousing and logistics to fulfillment or retail — you can exchange documents and coordinate trading partner relationships without the substantial burden and expense of installing and maintaining legacy, on-premise software.

Key Benefits

Scale to your needs

Easily handle any transaction volume. With Boomi's APIs, you can quickly onboard thousands of trading partners while maintaining complete visibility of all activities with a unified reporting portal for your EDI and application integration processes.

Simplified development

Boomi's visual user interface (UI) with drag-and-drop mapping tools, re-usable components, pre-built sample processes and crowd-sourced features for mapping and error resolution make it easy for you to build simple to sophisticated EDI integrations — no coding required.

Industry-standard connectivity

Boomi supports EDI standards X12, EDIFACT, HL7, RosettaNet and Tradacoms, as well as trading partner communication requirements, including AS2, disk, FTP, SFTP, HTTP and HTTPS. We also provides a library of EDI document types that you can easily map to transfer data to or from your back-end systems.

Managed services

Boomi EDI Managed Service removes the operational burden of EDI system administration. Our EDI specialists monitor and manage your EDI system, ensuring that your partner network is always running at peak performance.

Quickly and easily build processes with drag-and-drop tools — no coding required

Key Features

Boomi B2B/EDI Management provides a rich set of features that simplify and speed up trading partner interactions.

Trading Partner Framework

Set up and manage all trading partner components from one console to quickly find, configure, and deploy changes for your partner communications.

Full Acknowledgment Handling

All EDI communications with partners are tracked for reconciliation purposes. Documents that were not successfully transferred can be re-sent automatically or manually.

Reporting & Auditing

Our trading partner reporting portal provides a detailed view of all exchanged EDI documents, simplifying tracking, error resolution and reconciliation.

Partner Onboarding

Programmatically onboard trading partners via the Boomi AtomSphere API, virtually eliminating data errors and reducing onboarding time from weeks to hours.

Support Business Users

Role-based access allows business users to add, remove or change specific parts of the process, making it easy to respond rapidly to evolving business requirements.

Automatic Updates

Boomi continuously and automatically updates the platform and all Atoms, providing you with the latest features and functionality. Boomi's managed regression testing ensures that your EDI processes continue to run seamlessly across updates.

Simplified Data Mapping

Boomi Suggest uses the millions of indexed mappings to automatically recommend data maps between EDI, flat files, XML and database formats based on the successful configurations that have been built by other users.

“Boomi gives my team more visibility and control over critical data. Thanks to Boomi, we have extreme confidence in our EDI process.”

Gary Cifatte
